Creating Developer Account:

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag-and-drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

Restriction Rules

Specify the type of information that the custom field will contain.

Data Type

Select one of the data types below.

- ☐ **Number (Selected)**
A system-generated, sequential number that uses a display format you define. The number is automatically incremented for each new record.
- ☐ **Auto Number**
A uniquely field that stores its value from a formula expression you define. The formula field is updated when any of the source fields change.
- ☐ **Formula**
A formula field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.
- ☐ **Lookup Relationship**
Creates a relationship that links this object to another object. The relationship field allows users to click on a linkage icon to select a value from a pop-up list. The other object is the source of the values in the list.
Creates a special type of parent-child relationship between this object (the child, or "lookup") and another object (the parent, or "lookup") where:
 - The relationship field is required on all detail records.
 - The ownership and sharing of a detail record are determined by the master record.
 - When a user deletes the master record, all detail records are deleted.
 - You can create drop-down menus on the related record to streamline the data entry.
The relationship field allows users to click on a linkage icon to select a value from a pop-up list. The master object is the source of the values in the list.
- ☐ **Master Detail Relationship**
Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.
- ☐ **External Lookup Relationship**
Allows users to select a true (checked) or false (unchecked) value.
- ☐ **Currency**
Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another application.

4. Give the Field Label : Maintenance service
5. Field Name : is auto populated
6. Default value : unchecked

Appointment

New Custom Field

Step 2 of 4

Field Label: Maintenance service

Default Value: ☒ Checked ☒ Unchecked

Field Name: Maintenance_service

Description:

Help Text:

Auto add to custom report type: ☒ Add this field to existing custom report types that contain this entity.

	<input type="checkbox"/>	<input type="checkbox"/>

Step 2. Enter the details Step 2 of 4

Field Label: [x](#)

Values: ☐ Use global picklist value set.
☒ Picklist values, with each value separated by a new line

☐ Display values alphabetically, not in the order entered
☐ Use first value as default value [x](#)
☒ Restrict picklist to the values defined in the value set [x](#)

Field Name: [x](#)

Description:

Step 2: Choose output type Step 2 of 5

Field Label: Field Name:

Auto add to custom report type: ☒ Add this field to existing custom report types that contain this entity.

Formula Return Type

☐ None Selected
☐ Classification
☐ Currency
☒ Date
☐ DateTime

Select one of the data types below.

☐ Calculate a boolean value.
 Example: $([TOTAL]) > [GrandTotal]$
☐ Calculate a dollar or other currency amount and automatically format the field as a currency amount.
 Example: $([Item] * [Price] - [Amount]) - [Cost]$
☐ Calculate a date, for example, by adding or subtracting days to other dates.
 Example: $[PeriodStart] - [CloseDate] - 7$
☐ Calculate a datetime, for example, by adding a number of hours or days to another datetime.
 Example: $[Now] - [Close] + 1$

5. Insert field formula should be : CreatedDate

Insert Field

Select a field, then click Insert. Labels followed by a ">" indicate that there are more fields available.

[Service records >

2. Select the Record-triggered flow and Click on Create.

New Flow

Core **All** **Templates**

Screen Flow

Guides users through a business process that's launched from Lightning pages, Experience Cloud sites, quick actions, and more.

Record-Triggered Flow

Launches when a record is created, updated, or deleted. This autolaunched flow runs in the background.

Schedule-Triggered Flow

Launches at a specified time and frequency for each record in a batch. This autolaunched flow runs in the background.

Platform Event—Triggered Flow

Launches when a platform event message is received. This autolaunched flow runs in the background.

Autolaunched Flow (No Trigger)

Launches when invoked by Apex, processes, REST API, and more. This autolaunched flow runs in the background.

Record-Triggered Orchestration

Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process.

 **Create**

Configure Start

Select Object

Select the object whose records trigger the flow when they're created, updated, or deleted.

Object

Willing client and feedback

Configure Trigger

Trigger the Flow When:

☐ A record is created

☐ A record is updated

☒ A record is created or updated

☐ A record is deleted

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Condition Requirements

None

Optimize the Flow for:

Fast Field Updates

Update fields on the record that triggers the flow to run. This high-performance flow runs before the record is saved to the database.

Actions and Related Records

Update any record and perform actions, like send an email. This more flexible flow runs after the record is saved to the database.

☐ Include a Run Asynchronously path to access an external system after the original transaction for the triggering record is successfully committed.

Cancel

Done

Amount Update

Amount_Update

Description

3. Select the Primary object as "Customer details".
4. Give the Report type Label as "Service information"
5. Report type Name is autopopulated.
6. Keep the Description as same.
7. Select Store in Category as "other Reports"
8. Select the deployment status as "Deployed", click on Next.

The screenshot shows the 'Report Type Focus' configuration page. It includes a section for 'Primary Object' with a dropdown menu set to 'Customer Details'. Below this is the 'Identification' section with fields for 'Report Type Label' (set to 'Service information'), 'Report Type Name' (set to 'Service information'), 'Description' (set to 'Service information'), and 'Store in Category' (set to 'Other Reports'). Green arrows point to each of these four fields. At the bottom is the 'Deployment' section with a radio button for 'In Development'.

Step 2: Define Report Records Set

Step 2 of 2

Previous Save Cancel

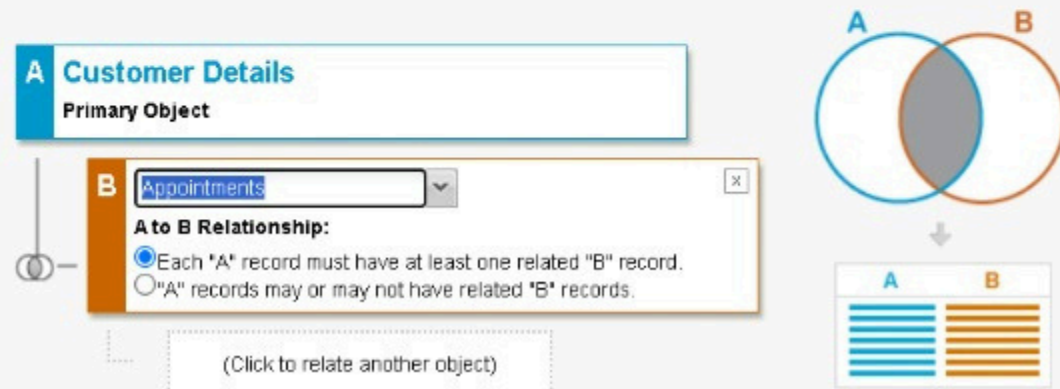

This report type will generate reports about Customer Details. You may define which related records from other objects are returned in report results by choosing a relationship to another object.
